

3 STEP CYBER DEFENCE

DIAGNOSE

CURE

INSURE

How Safe is your business from a Cyber Attack?

It is said that over half of UK business were affected by a Cyber Attack of some kind last year, but it's not something we brag about. Big data breaches hit the headlines every day, yet the rest of us keep our heads down; but for how long, with new GDPR legislation and threats of huge fines coming fast?

So are you doing enough to combat a Cyber Attack?

DIAGNOSE

First, IASME trained Cyber Security auditors visit your key locations to gain a comprehensive understanding of your IT Security Policies, processes, staff education and physical configuration and most importantly, to identify your ability to repel Cyber Attacks and comply with the new GDPR regulations.

CURE

A comprehensive report is then produced highlighting your weaknesses and creating your IT and GDPR roadmap to Cyber Essentials certification. Once certified for Cyber Essentials you are then passed to the Insurance specialists. Once insured you have an annual review to review your GDPR policy and how to combat fresh cyber threats as well as having access to our library of GDPR and cyber defence training documentation.

INSURE

Our exclusive insurance comes with better terms for businesses committed to obtaining Cyber Essentials certification, protecting their businesses against Cyber Attack and conducting annual audit refreshers. The comprehensive insurance is arranged with a 3-year agreement, ensuring no increase in premiums, if no claims are made. Most importantly, in the event of an attack, your cover comes with the support from ReSecure to get your business up and running quickly.
